# Login to Securly

## Manheim Township School District
Technology Training Guide

"Securly" is MTSD's web filtering solution, which will filter websites on all devices at school and all student iPads at home. All devices at school receive a default filter policy, but staff, high school students, and middle school students can authenticate to Securly to receive a higher level of access. When using school iPads at home, all students will be forced to login to Securly before they can access the Internet.

Two examples of Securly block pages are below. The size of your browser window determines which screen appears.

The image on the left has a *Details* link – you can click that to see why your requested page is blocked. Click *Login with Google* to be presented with a Google login screen.

Enter your full email address and your Google/MT password to authenticate. (*Note: If you are already logged into Google in the browser you are currently using, you will not need to authenticate to Securly because you will already have your correct filter policy.*)

If your account has access to your requested website, the site will load. If your account does not have access to the site, you will see another block page, and you can click the *Details* link to display the reason the page is blocked. (For example, the "Gambling" category is blocked district-wide.)
